

DeskSlide Change History

2.0.4.02 ==> 2.1.0.12

May 1, 2008. Document version 1.3

Main Features: Overview

ID	Report Build	Resolved Build	Description
180	2.1.0.10	2.1.0.12	Fix: Error message during uninstall: Error 145 removing C:\Documents and Settings...
178	2.0.5.02	2.1.0.10	Slide-Specific option to place desktop image on whole desktop and ignore the taskbar
148	2.0.4.02	2.1.0.05	Support for layout style "Stretch"
147	2.0.4.02	2.1.0.05	Option to apply Windows standard wallpaper styles only
139	2.1.0.03	2.1.0.04	Implement option to force margin for a given image layout style
138	2.1.0.03	2.1.0.04	Create property StyleMargin to define the default margin used for image layout
125	2.0.5.02	2.0.5.04	Add option to place desktop image on whole desktop and ignore the taskbar
121	2.0.4.02	2.0.5.02	Desktop margin always black. Should support user-defined Desktop color

Main Features: Resolution Detail

Note: To enable or use some of these properties, the deskslide.ini file has to be modified.

deskslide.ini is located in %appdata%\DeskSlide. Simply enter this path in Windows Explorer address bar and press ENTER to open the folder.

ID

[178](#) ***Slide-Specific option to place desktop image on whole desktop and ignore the taskbar***

Resolution:

Example for enabling this for Tile style:

IgnoreTaskBarTile=true

The default is false for all styles, with the exception of Tile, Center, and Stretch, where it is true. For information on the super default, see 125.

[148](#) ***Support for layout style "Stretch"***

Resolution:

This style is selectable from the GUI

[147](#) **Option to apply Windows standard wallpaper styles only**

Resolution:

Controlled by property *SimpleStyles* with default value "false". When set to true, the advanced scaling and display features of DeskSlide are not used, rather the standard Windows styles Center, Tile and Stretch are used. Also, the small image rules are not applied.

This feature may come in handy if your images have been already sized for display on your desktop, you are happy with the Windows styles Center, Tile and Stretch, and you just need DeskSlide to rotate the images for you.

To enable this feature, create a property *SimpleStyles* in deskslide.ini and set it's value to "true"

Example:

SimpleStyles=true

[139](#) **Implement option to force margin for a given image layout style**

Resolution:

Every style e.g. Auto Fit, Center etc can have it's own margin defined for it. If margins are not set for a specific style, a default is used. See 138. Margins can be used to reserve areas to place icons.

Example to create margins for the Auto Fit style:

StyleMarginAUTOFIT=5, 20,20,5

[138](#) **Create property StyleMargin to define the default margin used for image layout**

Resolution:

If margins are not set for a specific style, a default margin controlled by the property *StyleMargin* is used.

Create a property *StyleMargin* in deskslide.ini and set it's value to a comma-separated list of the margins in the form:
left,top,right,bottom.

Example:

StyleMargin=10,20,30,40

In this example, the left, top, right and bottom margins are set to 10,20,30 and 40 respectively.

The default value is "5,5,5,5".

Resolution:

Set property in deskslide.ini:

IgnoreTaskbar=true

[125](#) **Add option to place desktop image on whole desktop and**

ignore the taskbar

Resolution:
Set property in deskslide.ini:
IgnoreTaskbar=true

Default: false
For For Center, Tile and Stretch, the default is "false". For style-specific override, see [178](#)

[121](#) Desktop margin always black. Should support user-defined Desktop color

Resolution:
The margin color of the slides is no longer black, but depends on the Color you have set for your Desktop.

Other Features and Bug Fixes

ID	Report Build	Resolved Build	Description
177	2.1.0.09	2.1.0.09	Slides window flickers when on the lower part of the screen and the main window is moved
176	2.1.0.08	2.1.0.09	The checked slide style on the slides context menu is "Stretched" if the slide style is not overridden (Default)
175	2.1.0.07	2.1.0.08	Online Help image Slides->conf_slides.jpg needs replacement.
174	2.1.0.07	2.1.0.08	Broken image links in online Help: MainFunctions->traymenu.jpg and Slides->confwiz_imagelocation.jpg
149	2.1.0.06	2.1.0.07	Support properties to control the slide change refresh options
144	2.1.0.03	2.1.0.04	The Slides window should be docked to the main window, when the main window is moved
143	2.1.0.03	2.1.0.04	Child windows should be left-aligned with the main window if they are the same width, rather than always having them moved to the visible desktop
141	2.1.0.03	2.1.0.04	Unchecked Subfolder checkbox in Folder Manager ignored
140	2.0.4.02	2.1.0.05	Slide change causes some windows to flicker, refresh or repaint
137	2.1.0.03	2.1.0.04	Performance issue tiling very small images such as 1x1 pixels
135	2.1.0.03	2.1.0.04	Rename property "TileThreshold" to "SmallImageThreshhold"
134	2.1.0.03	2.1.0.05	Property "EnableLog" is obsolete. Remove from definition
133	2.1.0.02	2.1.0.03	Slide style override not working. The style on

- the slides list does not change.
- [131](#) 2.1.0.01 2.1.0.02 Skin location not found when DeskSlide is not started from the AppDir folder and a the working directory not specified
- [130](#) 2.0.4.02 2.1.0.01 Besides an error code and message, there should be information about the slide that failed
- [129](#) 2.0.4.02 2.0.5.03 The child windows e.g. Slides, Schedule, Style, should be repositioned if not within visible desktop
- [123](#) 2.0.4.02 2.0.5.02 Performance issue for large images due to calls to GetPictureSize() in GetSlideInfo() reloading the image just to get the dimensions
- [122](#) 2.0.4.02 2.0.5.02 Large images do not load. The desktop is blank
- [120](#) 2.0.5.01 2.0.5.04 Implement custom TRACE macros that helps in printing debug messages and errors to a trace console and to log file
- [101](#) 2.0.2.16 2.0.5.03 The main window is sometimes cropped
- [92](#) 2.0.2.15 2.0.5.03 Child windows of main window e.g. slides window are not visible if main window at lower screen area
